You have shown a positive allergic reaction to Methyldibromo glutaronitrile. Avoid contact with this substance. Here is a partial list of products known to have contained Methyldibromo glutaronitrile in the past. To be sure, you should check the contents on the package.

**What is it?**
Methyldibromo glutaronitrile is primarily a preservative in skin care products, paints, and wood.

Skin contact with Methyldibromo glutaronitrile is required for it to cause a rash. Discontinuation of exposure to products containing Methyldibromo glutaronitrile should result in improvement and/or resolution of your dermatitis. By law, all products made in the US for topical use have the ingredients listed either on the product package or the box that contains it, so check the labeling of your skin care products for this ingredient. If there is no information ask your pharmacist or call the company directly. At work, request a material safety data sheet (MSDS) to help identify potential sources of exposure.
